

DEODAR  R

Welcome

Dear reader,

Thank you for your interest in deodar houses!

We can deliver nationwide. deodar kit houses are really compact to ship. Below you can see a map of where deodar houses have been already built.

Please keep in mind that our houses are affordable, not cheap. It means using high-quality materials in the optimal ratio to guarantee the house's longevity. Think of factory houses like a perfectly planned recipe. Every bit is measured and drawn up to the last spec, so there is minimal material waste and no surprises with the budget.

We believe everyone deserves to live in a home that fits their vision and life goals, and we are committed to making that a reality.

Enjoy the catalog and don't hesitate to ask more information from us directly.

Best regards,
Team deodar

What is Deodar about?

Deodar produces energy-efficient and durable A-frame kit homes that can be assembled on-site. At its heart, Deodar is about empowering individuals to build their own high-quality homes, whether they're nestled close to a bustling city or tucked away in a remote corner of nature. We gave a modern twist to the traditional A-frame design, offering a range of different models to suit different needs, lifestyles, and budgets. In essence, Deodar is all about flexibility, efficiency, and a belief in the power of good design to help create homes that are uniquely suited to their owners' needs and aesthetics.

Benefits of Deodar houses

Thanks to their unique design, Deodar houses are spacious yet affordable. Because it requires very little maintenance and it's a low-energy building, your Deodar house will not force you to pay an expensive utility bill. A Deodar house is not a burden for the environment nor for the wallet of its owner. The A-frame shape of Deodar's most popular house models offers a spacious indoor area which is fully customizable. The fact that the houses come in a pre-cut kit makes them the ideal choice to build in remote locations.

Main features

Our A-frame houses are distinguished by their steep metal roof, which comes with 50 years of guarantee. The angle of the roof makes it ideal for installing solar panels. Thanks to the A-frame shape, there are no interior load-bearing walls. This means you can arrange the layout of the rooms exactly as you like. The houses are designed to be equipped with a generous amount of top-quality insulation, making them perfect to withstand the coldest winter and the hottest summer!

DEODAR

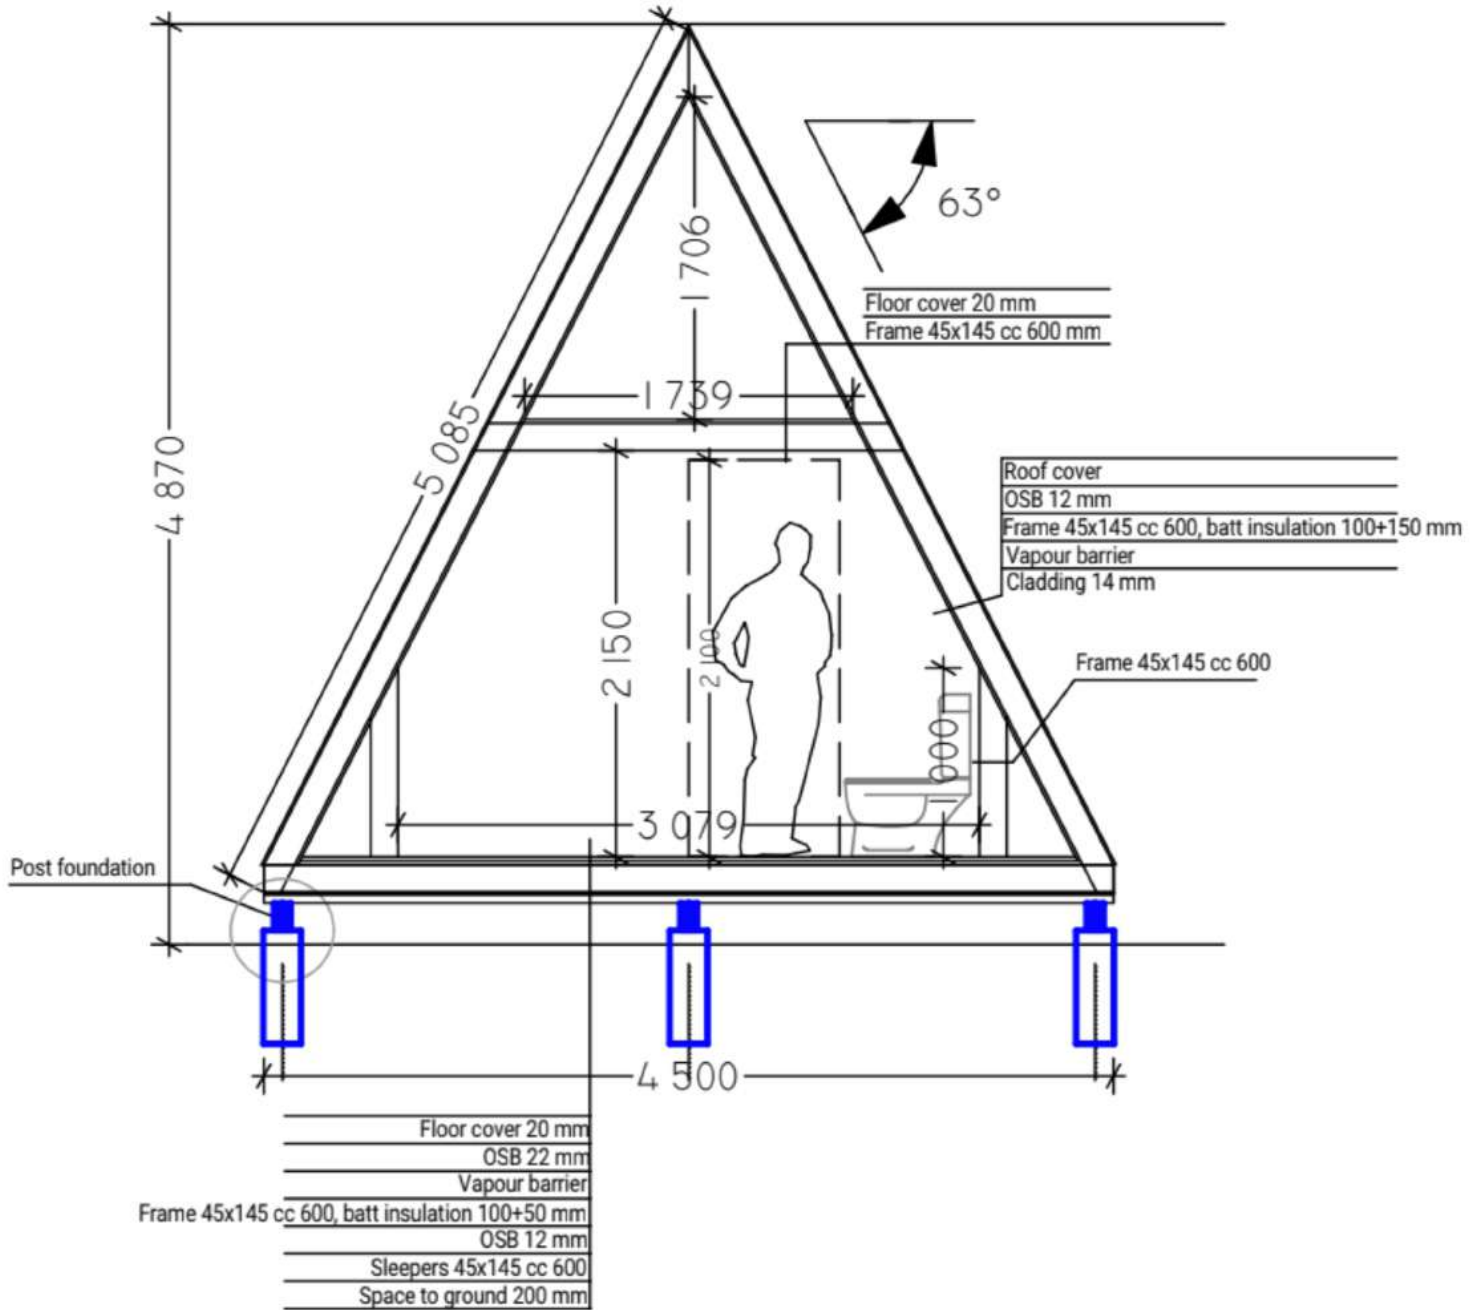

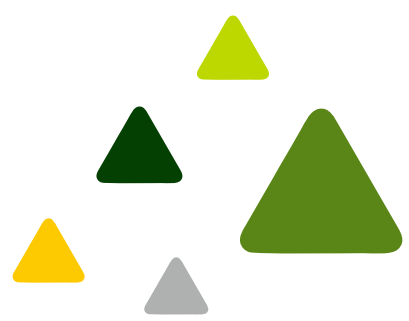

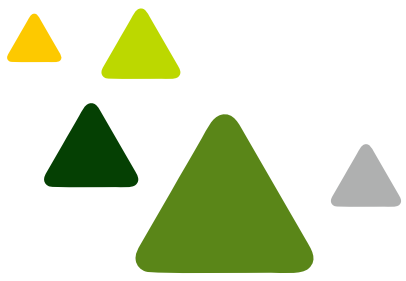

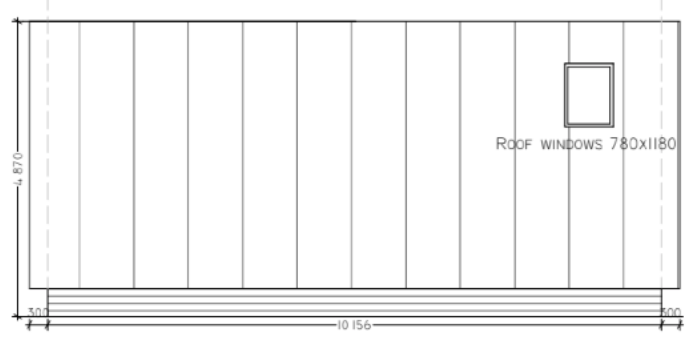

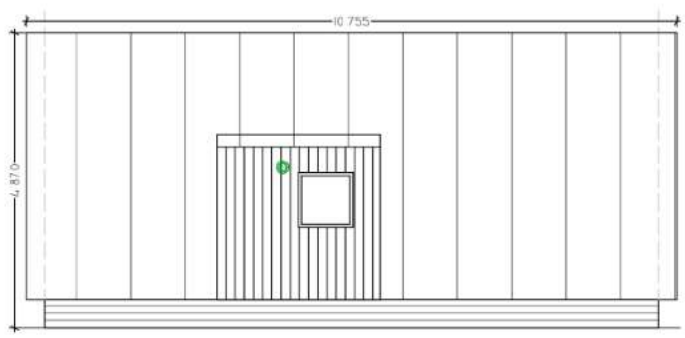

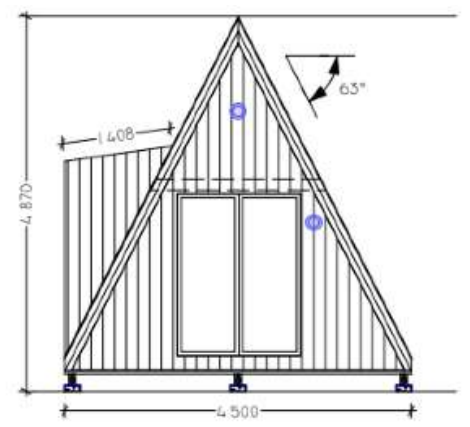

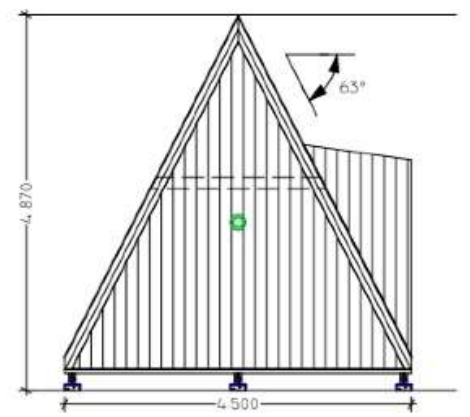

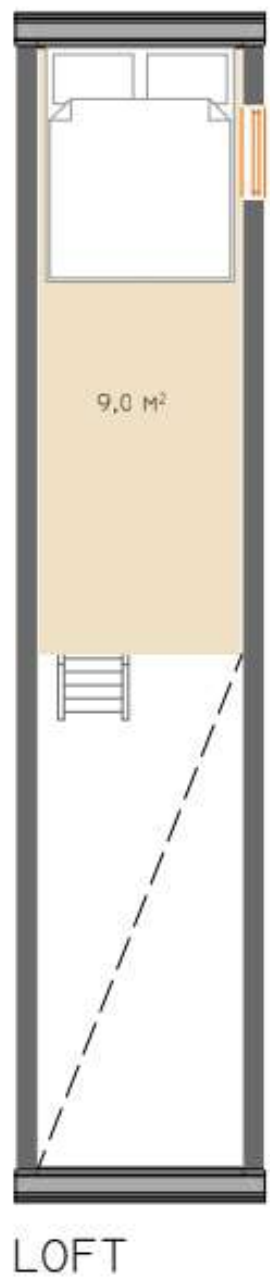

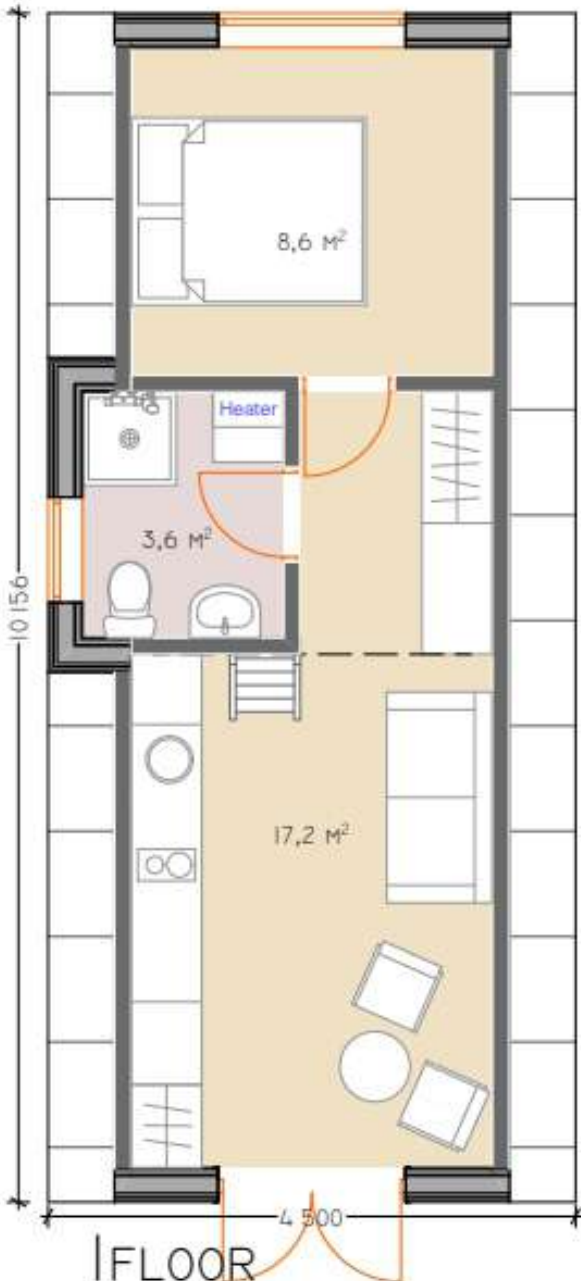

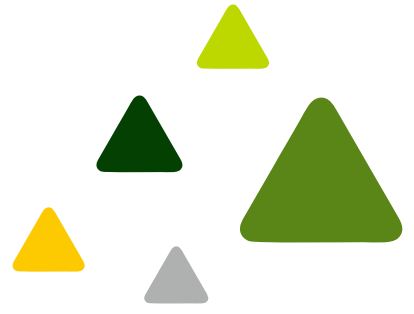

SOLO+ SERIES

The SOLO+ cabins stand apart from our TRIO and DUO series, available as DIY kits or comprehensive building guides. Opt for the latter to receive detailed PDF plans, including material and cut lists, along with a step-by-step assembly manual. By sourcing materials locally, you'll cut down on transport costs and contribute to your local community's economy. For enthusiasts of compact living, the Solo+ 100 isn't just a house—it's a lifestyle choice that can adapt to various needs, including an idyllic sauna. It's a haven for those who celebrate the art of living well in a space that is precisely enough, no more, no less.

DEODAR R

DUO SERIES

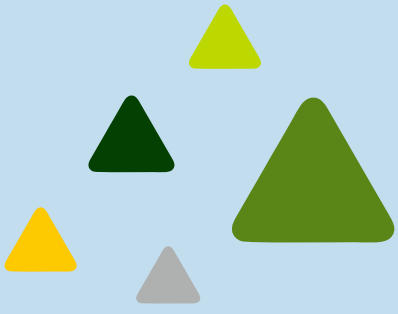

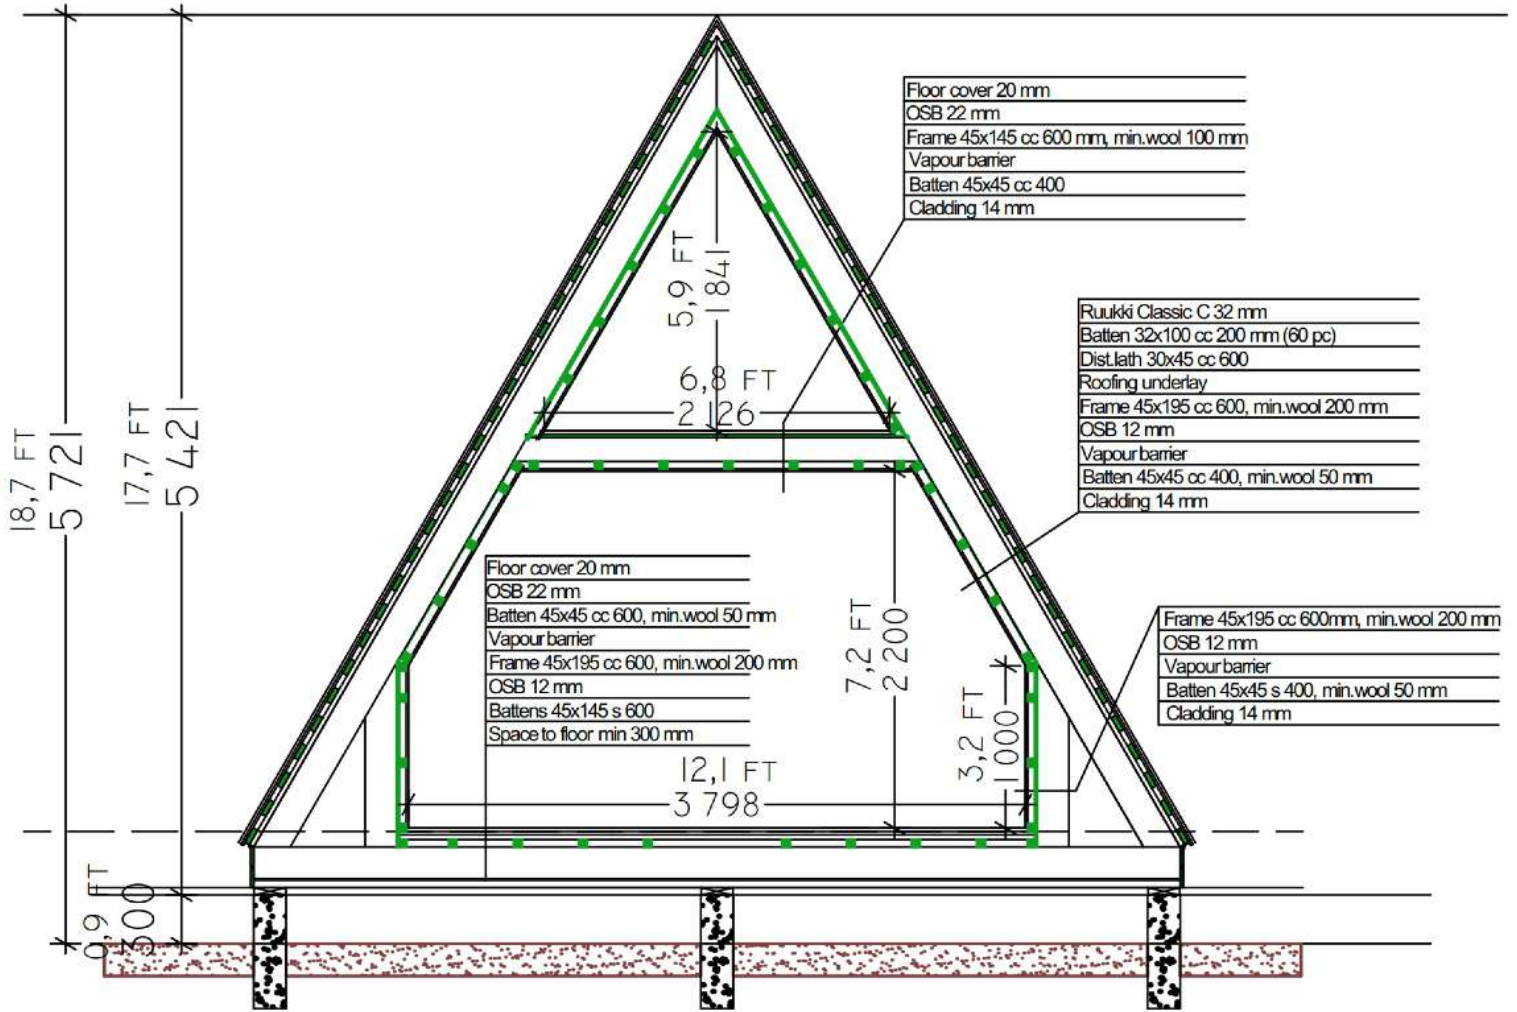

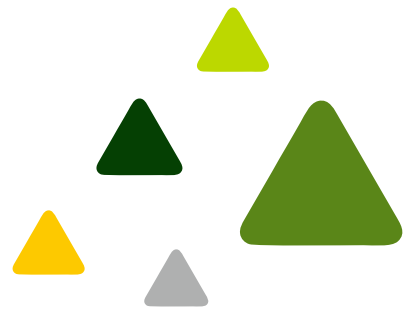

Introducing the Deodar DUO A-Frame House Kits - the perfect solution for those seeking a modern, minimalist home that combines functionality, affordability, and sustainability.

Designed with simplicity and versatility in mind, the Deodar DUO kits comes with everything you need to construct your dream A-frame house. With a flexible layout that can be customized to fit your needs, the DUO kits offers two floors of living space, large windows that let in plenty of natural light and a sleek contemporary exterior that stands out from the crowd.

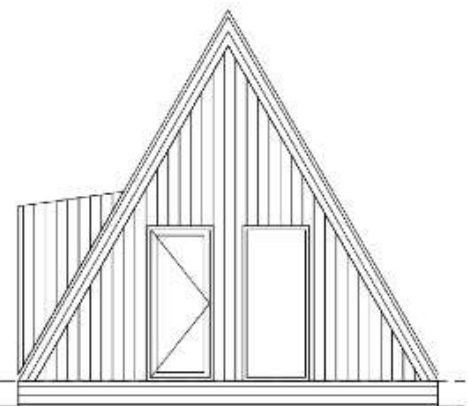

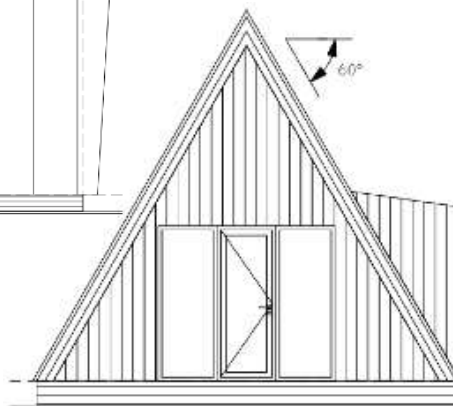

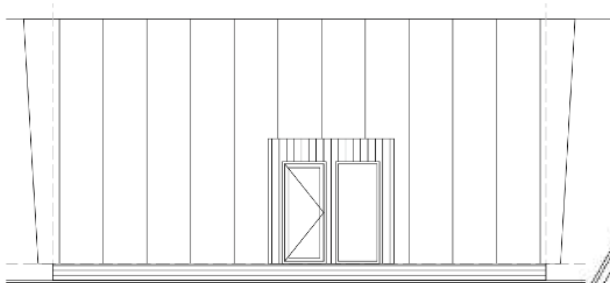

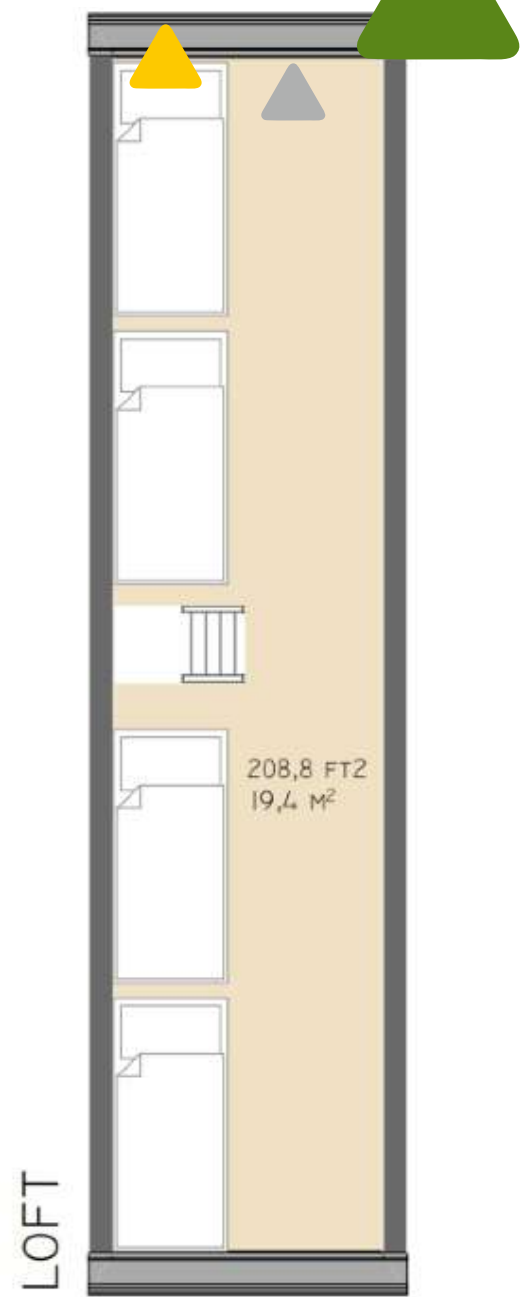

DEODAR

MAIN STRUCTURE

The structure is made of C24 graded and CE certified spruce lumber. It is sourced from sustainable Estonian forest. Trees grow slowly over here because all the weather elements are present (lots of rain in autumn, cold and snow in winter, humidity in spring, hot temperatures in summer). It makes the wood very thick and valued building material all around the world. The structure can be treated against termites and white ants upon request

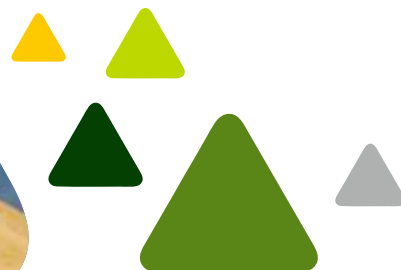

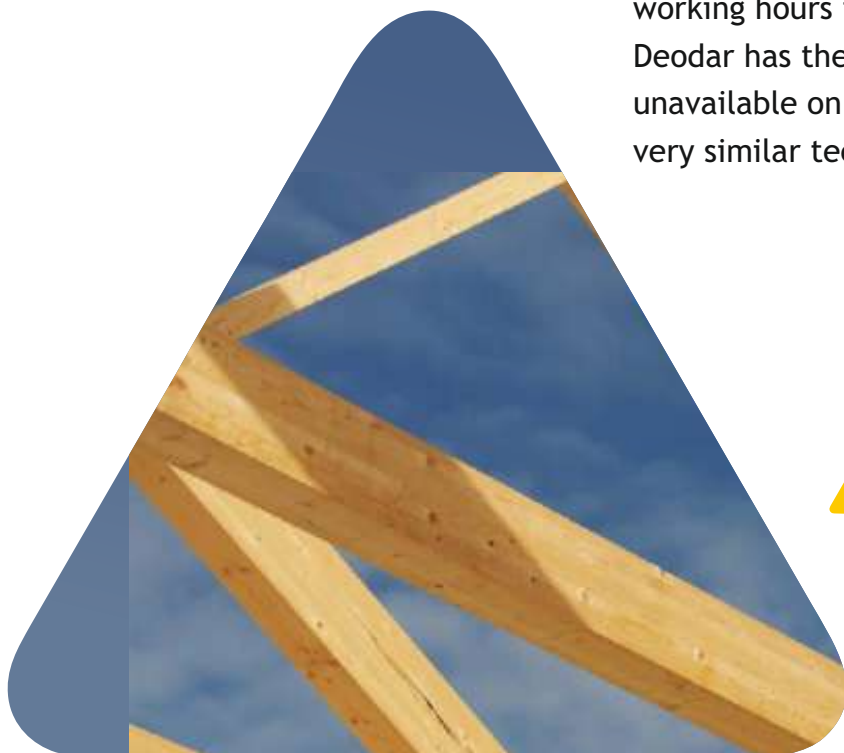

GL Beams

Ceiling beams are made of GL (glulam) for Trio series houses.

It creates the possibility to deliver the ceiling beam in one piece. That equals with more strength structurally and less working hours to install it.

Deodar has the right to replace GL beams if those are unavailable on the market. Substitute material has to have very similar technical features.
